

Vaccine Storage in an ILR

Never use frozen vials of Hep B, DPT, Pentavalent, IPV and TT

- Keep all types of vaccines in the baskets provided with the ILR.
- Keep one thermometer among the vaccines to

ensure the temperature is maintained between +2° to +8° Celsius. Monitor temperature twice daily (morning and evening) and record it in temperature log book.

- Keep space between boxes of vaccines for circulation of air.
- Keep diluents in the ILR for at least 24 hours before issuing to the immunization session.
